Learning and Teaching on the World Wide Web May 09 2021 This book is about using the Internet as a teaching tool. It starts with the psychology of the learner and looks at how best to fit technology to the student, rather than the other way around. The authors include leading authorities in many areas of psychology, and the book takes a broad look at learners as people. Thus, it includes a wide range of materials from how the eye "reads" moving graphs on a Web page to how people who have never met face-to-face can interact on the Internet and create "communities" of learners. The book considers many Internet technologies, but focuses on the World Wide Web and new "hybrid" technologies that integrate the Web with other communications technologies. This book is essential to researchers in psychology and education who are interested in learning. It is also used in college and graduate courses in departments of psychology and educational psychology. Teachers and trainers at any level who are using technology in their teaching (or thinking about it) find this book very useful. Key Features * Distinguished authors with considerable expertise in their fields * Broad "intra-disciplinary" perspective on learning and teaching on the Web * Focus on the Web and emerging Web-based technologies * Special attention to conducting educational research on-line * Emphasis on the Social and Psychological Context * Analyses of effective Web-based learning resources * Firmly grounded in contemporary psychological research and theory

Contributors offer classroom examples that teachers at all levels of experience can adapt for their own classes. The volume provides comprehensive coverage of the technical communication curriculum, from the two-year level to the graduate level; from service courses to degree programs. This volume is an important and indispensable resource for technical writing educators, and it will serve as an essential reference for curriculum and pedagogy development in technical communication programs.

Advertising and the World Wide Web Sep 13 2021 The chapters provide a wide-ranging view of issues addressing how advertisers can proceed on the Internet and World Wide Web. An initial chapter traces the development of Web advertising from its very beginnings as it was represented and discussed in the pages of Advertising Age. Although there is a noticeable trend to define Web advertising by comparing it to traditional media, it is clear that Web advertising just won't fit the old mold. Keith Reinhard of DDB Needham actually articulates this linkage between the old and new in his invited chapter. What the reader will encounter in Advertising and the World Wide Web is a solid conception of how Web advertising is different from anything that has come before. There are numerous discussions on consumer and advertiser interactivity, the role of Web advertising within larger campaigns, audience segmentation, and alternative Web-based promotion formats. The five sections cover definition and theory, structure, specific applications, legal issues, and the voice of the practitioner. Although there remain a few nay-sayers concerning the future of Web advertising, the reader will be able to see just how incredibly high-impact this new medium has become and the vast potential that it holds for future promotional endeavors.

The Information Revolution: Impact on Science and Technology Aug 12 2021 J.-E. Dubois and N. Gershon This book was inspired by the Symposium on "Communications and Computer Aided Systems" held at the 14th International CODATA Conference in September 1994 in Chambéry, France. It was conceived and influenced by the discussions at the symposium and most of the contributions were written following the Conference. This is the first comprehensive book, published in one volume, of issues concerning the challenges and the vital impact of the information revolution (including the Internet and the World Wide Web) on science and technology. Topics concerning the impact of the information revolution on science and technology include: • Dramatic improvement in sharing of data and information among scientists and engineers around the world • Collaborations (on-line and off-line) of scientists and engineers separated by distance • Availability of visual tools and methods to view, understand, search, and share information contained in data • Improvements in data and information browsing, search and access and • New ways of publishing scientific and technological data and information. These changes have dramatically modified the way research and development in science and technology are being carried out. However, to facilitate this information flow nationally and internationally, the science and technology communities need to develop and put in place new standards and policies and resolve some legal issues.
