Right here, we have countless books Ancoats The Cradle Of Industrialisation Informed Conservation and collections to check out. We additionally find the money for variant types and then type of the books to browse. The normal book, fiction, history, novel, scientific research, as capably as various extra sorts of books are readily available here.

As this Ancoats The Cradle Of Industrialisation Informed Conservation, it ends taking place physical one of the favored books Ancoats The Cradle Of Industrialisation Informed Conservation collections that we have. This is why you remain in the best website to see the incredible ebook to have.

[Industrialization of Biology](#) Jan 13 2021 The tremendous progress in biology over the last half century - from Watson and Crick's elucidation of the structure of DNA to today's astonishing, rapid progress in the field of synthetic biology - has positioned us for significant innovation in chemical production. New bio-based chemicals, improved public health through improved drugs and diagnostics, and biofuels that reduce our dependency on oil are all results of research and innovation in the biological sciences. In the past decade, we have witnessed major advances made possible by biotechnology in areas such as rapid, low-cost DNA sequencing, metabolic engineering, and high-throughput screening. The manufacturing of chemicals using biological synthesis and engineering could expand even faster. A proactive strategy - implemented through the development of a technical roadmap similar to those that enabled sustained growth in the semiconductor industry and our explorations of space - is needed if we are to realize the widespread benefits of accelerating the industrialization of biology. Industrialization of Biology presents such a roadmap to achieve key technical milestones for chemical manufacturing through biological routes. This report examines the technical, economic, and societal factors that limit the adoption of bioprocessing in the chemical industry today and which, if surmounted, would markedly accelerate the advanced manufacturing of chemicals via industrial biotechnology. Working at the interface of synthetic chemistry, metabolic engineering, molecular biology, and synthetic biology, Industrialization of Biology identifies key technical goals for next-generation chemical manufacturing, then identifies the gaps in knowledge, tools, techniques, and systems required to meet those goals, and targets and timelines for achieving them. This report also considers the skills necessary to accomplish the roadmap goals, and what training opportunities are required to produce the cadre of skilled scientists and engineers needed.

The British Industrial Revolution in Global Perspective May 29 2022 Why did the industrial revolution take place in eighteenth-century Britain and not elsewhere in Europe or Asia? In this convincing new account Robert Allen argues that the British industrial revolution was a successful response to the global economy of the seventeenth and eighteenth centuries. He shows that in Britain wages were high and capital and energy cheap in comparison to other countries in Europe and Asia. As a result, the breakthrough technologies of the industrial revolution - the steam engine, the cotton mill, and the substitution of coal for wood in metal production - were uniquely profitable to invent and use in Britain. The high wage economy of pre-industrial Britain also fostered industrial development since more people could afford schooling and apprenticeships. It was only when British engineers made these new technologies more cost-effective during the nineteenth century that the industrial revolution would spread around the world.

Ancoats Jun 29 2022 This book raises awareness of the wide range and varied character of the historic mills, buildings and canals which constitute the Ancoats townscape. It outlines how the area and its community have evolved over the last two and a half centuries.

Statistics, Knowledge and Policy Key Indicators to Inform Decision Making Sep 20 2021 This conference proceedings compares various approaches to the development of key indicator systems which would provide reliable information spanning the social, economic and environmental domains.

[Proto-industrialisation](#) Apr 15 2021

[Iron, Steam & Money](#) Feb 23 2022 In late eighteenth-century Britain a handful of men brought about the greatest transformation in human history. Inventors, industrialists and entrepreneurs ushered in the age of powered machinery and the factory, and thereby changed the whole of human society, bringing into being new methods of social and economic organisation, new social classes, and new political forces. The Industrial Revolution also dramatically altered humanity's relation to the natural world and embedded the belief that change, not stasis, is the necessary backdrop for human existence. Iron, Steam and Money tells the thrilling story of those few decades, the moments of inspiration, the rivalries, skulduggery and death threats, and the tireless perseverance of the visionaries who made it all happen. Richard Arkwright, James Watt, Richard Trevithick and Josiah Wedgwood are among the giants whose achievements and tragedies fill these pages. In this authoritative study Roger Osborne also shows how and why the revolution happened, revealing pre-industrial Britain as a surprisingly affluent society, with wealth spread widely through the population, and with craft industries in every town, village and front parlour. The combination of disposable income, widespread demand for industrial goods, and a generation of time-served artisans created the unique conditions that propelled humanity into the modern world. The industrial revolution was arguably the most important episode in modern human history; Iron, Steam and Money reminds us of its central role, while showing the extraordinary excitement of those tumultuous decades.

A Sustainable Bioeconomy Jan 31 2020 An authoritative and comprehensive volume of knowledge and green technologies wholly focused on the future of the bioeconomy. The authors present data, show opportunities, discuss R&D findings, analyze strategies, assess the wider economic impact, showcase achievements, criticize policies and propose solutions for the green revolution in biofuels, biochemicals and biomaterials' production and power generation. A fascinating range of case studies from the US, China and many European countries are used to inform readers about the impact of this field on society and how various technologies are currently being implemented. Additionally, the role of industry on this green industrial revolution is outlined with contributions from several major companies such as DuPont (US), UPM-Kymmene Oy (Finland), Anhui BBCC Biochemical Co (China).

The Unbound Prometheus Jun 17 2021 Sample Text

Faith of Our Fathers Oct 22 2021 The study of popular culture has been an abiding preoccupation of historians and other academics, not just in the British Isles but elsewhere too. This volume of essays explores the manifestations of popular culture and belief in England, Ireland and Wales from the Reformation onwards. As an interdisciplinary collection it brings together specialists in English Literature, History, Celtic and Religious Studies. It offers new insights thematically via a selection of diverse contributions. The nexus between religion and popular culture links the contributions together, while the geographical spread of the topic facilitates a dynamic comparative methodology. What emerges from these explorations of rites of passage, festivals, revivalism, print culture and gender is the remarkable resilience of popular culture and the extent to which all levels of society were prepared to compromise.

Working Women in Mexico City Jan 01 2020 The years from the Porfiriato to the post-Revolutionary regimes were a time of rising industrialism in Mexico that dramatically affected the lives of workers. Much of what we know about their experience is based on the histories of male workers; now Susie Porter takes a new look at industrialization in Mexico that focuses on women wage earners across the work force, from factory workers to street vendors.

Working Women in Mexico City offers a new look at this transitional era to reveal that industrialization, in some ways more than revolution, brought about changes in the daily lives of Mexican women. Industrialization brought women into new jobs, prompting new public discussion of the moral implications of their work. Drawing on a wealth of material, from petitions of working women to government factory inspection reports, Porter shows how a shifting cultural understanding of working women informed labor relations, social legislation, government institutions, and ultimately the construction of female citizenship. At the beginning of this period, women worked primarily in the female-dominated cigarette and clothing factories, which were thought of as conducive to protecting feminine morality, but by 1930 they worked in a wide variety of industries. Yet material conditions transformed more rapidly than cultural understandings of working women, and although the nation's political climate changed, much about women's experiences as industrial workers and street vendors remained the same. As Porter shows, by the close of this period women's responsibilities and rights of citizenship Nsuch as the right to work, organize, and participate in public debate Nwere contingent upon class-informed notions of female sexual morality and domesticity. Although much scholarship has treated Mexican women's history, little has focused on this critical phase of industrialization and even less on the circumstances of the torilleras or market women. By tracing the ways in which material conditions and public discourse about morality affected working women, Porter's work sheds new light on their lives and poses important questions for understanding social stratification in Mexican history.

Multicultural Origins of the Global Economy Aug 20 2021 Develops a fresh non-Eurocentric analysis of the rise and development of the global economy in the last half-millennium.

Manufacturing in Colonial Zimbabwe, 1890-1979 Jul 27 2019 A key book on Zimbabwe's industrial policy and the relationship between manufacturing, the state, and economic interest groups.

[Sustainability](#) Apr 27 2022 Caradonna's unique and concise history broadens our understanding of what "sustainability" means, revealing how it progressed from a relatively marginal concept to an ideal that shapes everything from individual lifestyles, government and corporate strategies, and even national and international policy.

The Asian Pacific Rim and Globalization Sep 08 2020 A composite of theoretically informed reconnaissance studies of industrialization trajectories. The range of contributions provide different national models of corporate structures and patterns and levels of integration into the global economy.

The Cambridge History of Capitalism Nov 30 2019 The first volume of The Cambridge History of Capitalism provides a comprehensive account of the evolution of capitalism from its earliest beginnings. Starting with its distant origins in ancient Babylon, successive chapters trace progression up to the 'Promised Land' of capitalism in America. Adopting a wide geographical coverage and comparative perspective, the international team of authors discuss the contributions of Greek, Roman, and Asian civilizations to the development of capitalism, as well as the Chinese, Indian and Arab empires. They determine what features of modern capitalism were present at each time and place, and why the various precursors of capitalism did not survive. Looking at the eventual success of medieval Europe and the examples of city-states in northern Italy and the Low Countries, the authors address how British mercantilism led to European imitations and American successes, and ultimately, how capitalism became global.

Disability in the Industrial Revolution Jul 19 2021 This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. An electronic version of this book is also available under a Creative Commons (CC-BY-NC-ND) license, thanks to the support of the Wellcome Trust. The Industrial Revolution produced injury, illness and disablement on a large scale and nowhere was this more visible than in coalmining. Disability in the Industrial Revolution sheds new light on the human cost of industrialisation by examining the lives and experiences of those disabled in an industry that was vital to Britain's economic growth. Although it is commonly assumed that industrialisation led to increasing marginalisation of people with impairments from the workforce, disabled mineworkers were expected to return to work wherever possible, and new medical services developed to assist in this endeavour. This book explores the working lives of disabled miners and analyses the medical, welfare and community responses to disablement in the coalfields. It shows how disability affected industrial relations and shaped the class identity of mineworkers. The book will appeal to students and academics interested in disability, occupational health and social history.

Beyond Tenderpreneurship May 17 2021 Black Economic Empowerment (BEE) policies have been a central pillar of attempts to overcome the economic legacy of apartheid. Yet, more than two decades into democracy, economic exclusion in South Africa still largely reflects the fault-lines of the apartheid era. Current discourse often conflates BEE with the so-called 'tenderpreneurship' referred to in the title, namely the reliance of some emergent black capitalists on state patronage. Authors go beyond this notion to understand BEE's role from a unique perspective. They trace the history of black entrepreneurship and how deliberate policies under colonialism and its apartheid variant sought to suppress this impulse. In the context of modern South Africa, authors interrogate the complex dynamics of class formation, economic empowerment and redress against the backdrop of broader macroeconomic policies. They examine questions relating to whether B-BEE policies are informed by strategies to change the structure of the economy. These issues are explored against the backdrop of the experiences of other developing countries and their journeys of industrialisation. The relevant black empowerment experiences of countries such as the United States are also discussed. The authors identify policy and programmatic interventions to forge the non-racial future that the constitution enjoins South Africans to build.

Tanzania Mar 27 2022 This book gives an account of the political economy of Tanzania, from pre-colonial times to the present. It shows the strengths and weaknesses of Julius Nyerere, the leader who brought the country to independence in 1961. A new introductory chapter sets the book in context and discusses current issues such as natural resources.

Higher Education in the Era of the Fourth Industrial Revolution Feb 11 2021 This open access collection examines how higher education responds to the demands of the automation economy and the fourth industrial revolution. Considering significant trends in how people are learning, coupled with the ways in which different higher education institutions and education stakeholders are implementing adaptations, it looks at new programs and technological advances that are changing how and why we teach and learn. The book addresses trends in liberal arts integration of STEM innovations, the changing role of libraries in the digital age, global trends in youth mobility, and the development of lifelong learning programs. This is coupled with case study assessments of the various ways China, Singapore, South Africa and Costa Rica are preparing their populations for significant shifts in labour market demands - shifts that are already underway. Offering examples of new frameworks in which collaboration between government, industry, and higher education institutions can prevent lagging behind in this fast changing environment, this book is a key read for anyone wanting to understand how the world should respond to the radical technological shifts underway on the frontline of higher education.

Impact of Culture on the Transfer of Management Practices in Former British Colonies Mar 15 2021

The Wealth of States Dec 12 2020 John Hobson develops a new theory of international change using a sociological approach, through a detailed examination of nineteenth-century trade regimes, and the efforts of the Great Powers to increase their military capabilities before the First World War through tariff protectionism. His analysis reveals the importance of the state as an autonomous, 'adaptive' actor in domestic and international politics and economics, which is not dependent upon dominant classes, economic interest groups, the world economy or the geopolitical system of states.

Pathways to Industrialization in the Twenty-First Century Dec 24 2021 Over the last two centuries, the experiences of the first wave of industrialized countries in Europe and the US, and the more recent experiences of the East Asian Tigers, Indonesia, Malaysia, Thailand, China, India, and Vietnam, have illustrated the transformative nature of industrialization. There are reasons to believe that industrialization will continue to be one of the major engines of growth, transformation, and socioeconomic development. Industrial development enables a more rapid advancement toward developed country living standards. But many challenges remain, and new challenges have arisen. These include: integration into global value chains; the shrinking of policy space in the present international order; the rise of the Asian driver economies; new opportunities provided by resource-based industrialization; the accelerating pace of technological change in manufacturing; how to deal with jobless growth in manufacturing; creating adequate systems of financial intermediation; and how to respond to the threats of global warming and climate change. Under present conditions it may be more difficult than ever for the poorer developing countries to foster industrial development and structural change. They face a more complex, and daunting set of circumstances than the developing countries that embarked on industrialization after 1950. These changing and challenging circumstances require new thinking, and in particular new paradigms to guide researchers, policy makers, and international

development organizations in the future. The book includes chapters on the experiences of Africa, Latin America, China, and Indonesia, as well as thematic chapters on structural change, jobless growth, the evolution of industrial policy, and the challenges of environmental sustainability and climate change. It provides a timely analysis of the circumstances and challenges facing developing countries in industrialization, and offer fresh ideas for new paradigms to carry forward industrial policy in the future.

Impact of Industrialisation on the Tribal Population of Jharia-Ranigunge Coal Field Areas Apr 03 2020

Scotland Before the Industrial Revolution Jun 05 2020 A portrait of medieval and early modern Scotland through to the Union and its aftermath

Industrial Work and Life Oct 10 2020 *Industrial Work and Life: An Anthropological Reader* is a comprehensive anthropological overview of industrialisation in both Western and non-Western societies. Based on contemporary and historical ethnographic material, the book unpacks the 'world of industry' in the context of the shop floor, the family, and the city, revealing the rich social and political texture underpinning economic development. It also provides a critical discussion of the assumptions that inform much of the social science literature on industrialization and industrial 'modernity.' The reader is divided into four thematic sections, each with a clear and informative introduction: historical development of industrial capitalism; shopfloor organization; the relationships between the workplace and the home; the teleology of industrial 'modernity' and working-class consciousness. With readings by key writers from a range of backgrounds and disciplines, *Industrial Work and Life* is the essential introduction to the study of industrialisation in different societies. It will appeal to students across a wide range of subjects including: anthropology, comparative sociology, social history, development studies, industrial relations and management studies.

Keeping the Lights on Sep 28 2019 *Keeping the Lights On: Nuclear, renewables and climate change*, sixth report of session 2005-06, Vol. 3: *Written Evidence*

The First Industrial Woman Nov 10 2020 Why study women and the industrial revolution? Deborah Valenze's groundbreaking reassessment of this classic problem in European history reminds us that questions of gender and work are at the center of our experience in the modern world. Too often, the study of industrialization charts an inevitable and largely technological course. Valenze sets aside this approach in order to examine the underlying assumptions about gender and work that informed the transformation of English society, and in turn, our ideas about economic progress. How did England change from an agriculturally based nation, in which female labor played an active and acknowledged part, to an industrial power resting on a notion of male productivity? Through selective treatments of agriculture, spinning, and cottage industries, Valenze shows how the rise of values of productivity and rationality subordinated women of the working class and strengthened an emerging ethos of individualism. She also analyzes the influential ideas of Thomas Malthus, Hannah More, and other authors, whose publications reinforced these same tendencies in the early nineteenth century. In an elegant and compelling account, Valenze charts the birth of a new economic order resting on social and sexual hierarchies which remain a part of our contemporary lives.

The Industrialisation of Arts Education Jul 31 2022 This book comprises the responses of a group of multi-disciplinary writers/researchers/practitioners to the proposition that arts education in the twenty-first century has become industrialised. Historical and contemporary examples of how arts education prepares students for working in industry are discussed to show how the expectations of educators, students and industry representatives do not always concur. The extent to which arts pedagogies have been informed by the agendas of the cultural industries as well as wider neoliberal ideologies are also considered. This leads to questions about the function and value of arts education. The debates expose tensions of producing students who are 'industry-ready' in an educational context that must, at the same time, consider other issues such as sustainability and widening participation. Writers, educators and researchers in vocational education, creative writing, jewellery design, animation, fashion branding and popular music investigate the complexities relating to this topic from their own diverse points of view.

Corporate Social Responsibility Jun 25 2019 This introductory textbook explores the key issues in global business in corporate social responsibility.

Manufactured Bodies Oct 02 2022 Industrialization is a notoriously complex issue in terms of the hazards and benefits it has brought to human beings in our endeavors to improve our lives. This is never more evident than in the field of health and medicine, where there are many questions about the causes and treatments of diseases we commonly encounter today, such as cancer, diabetes and degenerative age-related conditions. Are there genetic predispositions to these conditions? Are they a mirror of our modern lifestyles, driven by our fast-paced lifestyles or have they always existed but gone undetected? The archive of human skeletal remains at the Museum of London provides a large bank of evidence that has been explored here, along with other skeletal collections from around England, to investigate how far some of these diseases go back in time and what we can tell about the influence of living environments past and present on human health. The Industrial Period was a key period in human history where substantial change occurred to the population's lifestyles, in terms of occupations, housing and diet as well as leisurely past-times, all of which would have impacted on their health. London had become the most densely populated metropolis in the world, the beating heart of trade and consumerism, an unambiguous example of the urban experience in the Industrial age. Using up-to-date medical imaging technologies in addition to osteoarchaeological examination of human skeletal remains, we have been able to establish the presence of modern day diseases in individuals living in the past, both before and during Industrialization, to compare to rates in UK populations today. By re-examining the skeletal evidence, we have traced how the perils of unregulated rural and urban lives, changing food consumption, transport, technologies as well as improving medical treatment and life expectancy, have all altered health patterns over time.

The Fourth Industrial Revolution Nov 03 2022 The founder and executive chairman of the World Economic Forum on how the impending technological revolution will change our lives We are on the brink of the Fourth Industrial Revolution. And this one will be unlike any other in human history. Characterized by new technologies fusing the physical, digital and biological worlds, the Fourth Industrial Revolution will impact all disciplines, economies and industries - and it will do so at an unprecedented rate. World Economic Forum data predicts that by 2025 we will see: commercial use of nanomaterials 200 times stronger than steel and a million times thinner than human hair; the first transplant of a 3D-printed liver; 10% of all cars on US roads being driverless; and much more besides. In *The Fourth Industrial Revolution*, Schwab outlines the key technologies driving this revolution, discusses the major impacts on governments, businesses, civil society and individuals, and offers bold ideas for what can be done to shape a better future for all.

Academic Libraries Nov 22 2021 As we begin to fundamentally redefine our world, informed through the Fourth Industrial Revolution (4IR) lens, entire industries are gearing up for this disruptive event. Library practices have been no exception. With the advent of advanced digital technology, knowledge is becoming more readily accessible. This chapter focuses on how libraries need to respond, adapt, and transform to become meaningful spaces in our rapidly changing 21st century, within the 4IR and coupled with the restrictions of the pandemic. Tracing the evolution of technology over the centuries, the changing role of the library as a response to disruptions is discussed.

The Cosmos Economy May 05 2020 If man's next big step is to live and work in space, then what will everyone do out there that is so different from what we are now doing here on Earth? As the future of space comes into focus it is clear that profit and power are the core elements of the new space economy. This entertaining and informative book looks at human settlement in space as a mainstream business opportunity for investors, entrepreneurs and far-sighted individuals seeking to secure their place in the innovative commercial space sector. Dr. Jack Gregg presents a unique 5-phase development roadmap that shows how space will grow from a frontier economy to a mature integrated market. Written in simple, non-technical language, this book answers such questions as: • What is the new industrial space economy? • What are the challenges and roadblocks on the way to a robust space economy? • How will the rapid growth of the new space economy impact commerce back on Earth? • How can the one best invest in profitable space-related enterprises? The *Cosmos Economy* is for readers who hope to be better equipped and more informed about the new space economy; someone who wants to learn how to take part in the business opportunities of the new high frontier of commercial space.

Timescapes of Modernity Oct 29 2019 Introducing a unique 'timescape' perspective the author reexamines environmental problems and their cures and provides the potential for innovative new strategies to deal with environmental hazards.

The Impact of the Industrial Revolution Mar 03 2020 *Current Real-World Perspectives Enhance Students' Understanding of Health Education and Promotion, Principles and Foundations of Health Promotion and Education* provides, students with a solid foundation in the history, philosophy, theory, and ethics of health education. Considered the best overall introduction to the growing field of health education and promotion, the text connects fundamental topics to research, resources, and practitioners. The Seventh Edition covers the roles and responsibilities of health education specialists, potential occupational settings, and the ethics that inform professional decisions. Looking at the past, present, and future of health, health care, and health education and promotion, the book features discussions of recent health reforms, the evolving professional landscape, the use of social media in health promotion, and much more. More Practical Applications and Increased Diversity Improve Student Comprehension. New case studies, specifically in Chapter 4: Theories and Planning Models, better reflect current practitioners' experiences and show theory in action. More diverse health education settings, are incorporated throughout all chapters to give students a more comprehensive view of the profession. 9 Practitioner's Perspective boxes have been updated to reflect a wider, more diverse range of practitioner experiences. Please visit us at www.pearsonhighered.com for more information. To order any of our products, contact our customer service department at (800) 824-7799, or (201)767-5021 outside of the U.S., or visit our campus bookstore. Book jacket.

Industrialization and Development Sep 01 2022 The restructuring of industrial production, the international division of labor, and continual technological change place developing countries in a global process of industrialization. This book clarifies the positive and negative aspects of this process and examines two different theoretical approaches used to achieve industrialization. The book first focuses on the international economy through examining in detail two relatively successful Third World industrializers--Brazil and South Korea, and then shifts its emphasis to the specific aspects of industrialization such as technology, gender relations, culture and the environment

A Dictionary of Environmental History Aug 27 2019 Increasing awareness of the extent and cause of environmental problems has fuelled the emergence of a new and timely discipline: environmental history. An exciting blend of geography, history, archaeology, anthropology, landscape, environment and science, it seeks to reveal how human activity has affected the environment in the past and how we, in turn, have been affected by that environment. How did people use and transform their environment? What problems of pollution and resource depletion occurred? What has been the impact of industrialisation and urbanisation? How have people's perceptions of nature and the environment changed over time? Environmental historians are revealing how and why our environment changed in the past, they are providing key insights into the mechanisms that influence environmental change today, and are helping to make informed decisions on crucial environmental concerns such as deforestation, desertification, pollution, global warming and climate change. Professor Whyte's *A Dictionary of Environmental History* provides in a single volume a comprehensive reference work covering the past 12,000 years of the Earth's environmental history. An introduction to the discipline is followed by almost 1,000 entries covering key terminology, events, places, dates, topics, as well as the major personalities in the history of the discipline. Entries range from shorter factual accounts to substantial mini-essays on major topics and issues. Fully cross-referenced and with an extensive bibliography, this pioneering work provides an authoritative yet accessible resource that will form essential reading for academics, practitioners and students of environmental history and related disciplines.

The Industrial Revolution in Scotland Jul 07 2020 A succinct and accessible account of the nature and impact of industrialisation in Scotland.

Greening Industrialization in Sub-Saharan Africa Jan 25 2022 This book explores the concept of greening industrialization and issues and considerations surrounding it through the lens of Sub-Saharan Africa. The book critically examines the concept of greening industrialization and describes the progress and data challenges of monitoring the Sustainable Development Goals confronting African countries. The chapters summarize the policy and programme literature focused on eight policy regimes essential for greening industrialization and identify opportunities for greening industrial policies. The authors lay out a research agenda that would inform, enable and support greening industrialization in Sub-Saharan Africa and provide an overview of green industrial plans that include climate strategies, energy efficiency strategies and green industry assessments. This book will be of great interest to students, scholars, policy makers and planners in the fields of Sub-Saharan Africa development and African environmentalism.

Imagining Soldiers and Fathers in the Mid-Victorian Era Aug 08 2020 Beginning with the premise that women's perceptions of manliness are crucial to its construction, Susan Walton focuses on the life and writings of Charlotte Yonge as a prism for understanding the formulation of masculinities in the Victorian period. Yonge was a prolific writer whose bestselling fiction and extensive journalism enjoyed a wide readership. Walton situates Yonge's work in the context of her family connections with the army, showing that an interlocking of worldly and spiritual warfare was fundamental to Yonge's outlook. For Yonge, all good Christians are soldiers, and Walton argues persuasively that the medievalised discourse of sanctified violence executed by upright moral men that is often connected with late nineteenth-century Imperialism began earlier in the century, and that Yonge's work was one major strand that gave it substance. Of significance, Yonge also endorsed missionary work, which she viewed as an extension of a father's duties in the neighborhood and which was closely allied to a vigorous promotion of refashioned Tory paternalism. Walton's study is rich in historical context, including Yonge's connections with the Tractarians, the effects of industrialization, and Britain's Imperial enterprises. Informed by extensive archival scholarship, Walton offers important insights into the contradictory messages about manhood current in the mid-nineteenth century through the works of a major but undervalued Victorian author.
