Optical and Digital Image Processing Feb 11 2021 In recent years, Moore's law has fostered the steady growth of the field of digital image processing, though the computational complexity remains a problem for most of the digital image processing applications. In parallel, the research domain of optical image processing has matured, potentially bypassing the problems digital approaches were suffering and bringing new applications. The advancement of technology calls for applications and knowledge at the intersection of both areas but there is a clear knowledge gap between the digital signal processing and the optical processing communities. This book covers the fundamental basis of the optical and image processing techniques by integrating contributions from both optical and digital research communities to solve current application bottlenecks, and give rise to new applications and solutions. Besides focusing on joint research, it also aims at disseminating the knowledge existing in both domains. Applications covered include image restoration, medical imaging, surveillance, holography, etc... "a very good book that deserves to be on the bookshelf of a serious student or scientist working in these areas." Source: Optics and Photonics News **Digital Image Processing** May 29 2022

Digital image processing Jun 17 2021 Since several years, methods and entire systems have been developed to evaluate digitized picture data from rather different problem areas such as medicine, geological and earth resource investigations, satellite applications, and industrial automation to name but a few. As is to be expected, methodical approaches are usually first published in the context of the special application for which they have been developed. To intensify the exchange of know-how regarding the various methods across the boundaries of special application areas, the Technical Committee 6 of the Gesellschaft für Informatik in cooperation with the Technical Committee 6 of the Nachrichtentechnische Gesellschaft in the VDE have organized a conference on Digitized Image Processing at Munich, March 28-30, 1977, the proceedings of which are presented in this volume. It is a pleasure to thank my colleagues J. Bodechtel, München R. Dierstein, Oberpfaffenhofen Th. Einsele, München P. Heintzen, Kiel H. Kazmierczak, Karlsruhe A. Schief, Karlsruhe J. Schürmann, Ulm for their willingness to offer their time and cooperation under some what stringent boundary conditions in selecting the program for this conference. My special thanks are due to Prof. Bodechtel for his organizational effort to host the conference at his institute. May I mention that Munich with its world renowned treasures of paintings provides the opportunity to experience some individual picture processing of a kind which in my opinion is worth the effort even if it is not digital.

Advances in Digital Image Processing Sep 01 2022 Digital image processing, originally established to analyze and improve lunar images, is rapidly growing into a wealth of new applications, due to the enormous technical progress made in computer engineering. At present, the most important fields of growth appear to emerge in the areas of medical image processing (i. e. tomography, thermography), earth resource inventory (i. e. land usage, minerals), office automation (i. e. document storage, retrieval and reproduction) and industrial production (i. e. computer vision for mechanical robots). Currently, emphasis is being shifted from signal-processing research and design-innovation activities towards cost-efficient system implementations for interactive digital image processing. For the years ahead, trends in computer engineering indicate still further advances in Large Scale Integration (LSI) and Input/Output (I/O) technologies allowing the implementation of powerful parallel and/or distributed processor architectures for real-time processing of high resolution achromatic and color images. In view of the many new developments in the field of digital image processing and recognizing the importance of discussing these developments amongst key scientists that might make use of them, ffiM Germany sponsored an international symposium on 'Advances in Digital Image Processing', held at Bad Neuenahr, Federal Republic of Germany, September 26 - 28, 1978. The interest shown in this symposium encouraged the publication of the papers presented in this volume of the ffiM Research Symposium Series.
