**Advances in PET** Aug 20 2019 This book is a guide to new and emerging PET technology, instrumentation, and its place in clinical practice. PET technology is currently moving from

the conventional photomultiplier tube (PMT) detector based PET to the new generation, solid state light sensor detector. This is a technological leap and holds significant implications for the use of PET imaging. This book introduces and describes the emerging and new generation of PET instrumentations and technologies across manufactures, focusing on solid-state PET detector designs, system characteristics, and clinical practices as well as future advanced Time-of-Flight (TOF) PET technologies. Organized into three sections, the basics of PET imaging; solid state digital PET instrumentation, technology, and clinical practice; and a look to the future of PET imaging, chapters present a full picture of PET imaging, where we are and where we will be. Nuclear medicine physicians, physicists, and technologists can use this book to better understand future PET systems, novel PET technologies, and potential game changes of clinical PET practice.

**Documentation as Art** Jul 11 2021 Documentation as Art presents documentation as an expanded practice that is radically changing the ways in which to look at, participate in, and generate art. Bringing together expertise from different disciplines, the book provides an in-depth investigation of the development of documentation as a set of production, circulation, and preservation strategies. Illustrating how these are often led by artists, audiences, and museums, the contributions offer new insights into digital art and its history, curation, and preservation, through documentation. Considering documentation as the main method of preserving these art forms, the book analyses how it can address the inherent challenges of capturing live events, visitor experiences, and evolving artworks. Showing how documentation itself can become (part of) an original artwork, the book discusses ways in which these expanded practices can impact the value and experience of the documented event or artwork, giving consideration to how this might affect the traditional authority of the museum as creator of documentation used for future reference, historical relevance, or cultural memory. Documentation as Art demonstrates how the curation and preservation of documentation and the introduction of audience-generated documentation are radically changing exhibition and visiting practices in which documentation is becoming a significant and emergent cultural form in its own right. The book will appeal to researchers and students engaged in the study of museums and curation, art and art history, performance, new media and digital art, library and information science, and conservation.

**Histories of Performance Documentation** May 21 2022 How might we document, curate, collect, and exhibit performance? *Histories of Performance Documentation* traces the many ways in which museums have approached performance works from the 1960s onwards. Considering the unique challenges of documenting live events including hybrid and interactive arts, games, virtual and mixed reality performance, this collection investigates the burgeoning role of the performative in museum displays, and examines a number of interdisciplinary documentation practices which have influenced the field of performance documentation. Gabriella Giannachi and Jonah Westerman bring together interviews and essays by leading curators, conservators, artists and scholars from institutions including MoMA, Tate, SFMoMA and the Whitney. Developing from recent approaches which argue that discussions of performance should not focus purely on the live event, and that documentation should not be read solely as a process of retrospection, these chapters build a radical new framework for thinking about the relationship between performance and its documentation - and how documentation might shape ideas of what constitutes performance in the first place.

*Assessment and Documentation in Early Childhood Education* Oct 02 2020 Documentation in early childhood education is typically seen as a means to enhance the quality of care and education, and as a way to take account of the child's view. *Assessment and Documentation in Early Childhood Education* considers the increasing trend towards systematic child documentation especially in early childhood institutions. The authors present ways in which assessment and evaluation is done sometimes explicitly but more often implicitly in these practices, and explore its means, aims, forms, and functions. They also examine the rationalities of child documentation from the perspective of professional practice and professionalism and suggest that documentation and assessment practices can weaken and constrain but also empower and strengthen teachers, children and parents. Topics explored include: Different forms of documentation and assessment Documentation and listening to the children Dilemmas of assessment and documentation Participation by children Involvement of parents This timely book will be appealing for those studying in the field of early childhood education, teacher education, special education, general education, social work, counselling, psychology, sociology, childhood studies, and family studies.

**Instrumentation Reference Book** Sep 20 2019 The discipline of instrumentation has grown appreciably in recent years because of advances in sensor technology and in the interconnectivity of sensors, computers and control systems. This 4e of the *Instrumentation Reference Book* embraces the equipment and systems used to detect, track and store data related to physical, chemical, electrical, thermal and mechanical properties of materials, systems and operations. While traditionally a key area within mechanical and industrial engineering, understanding this greater and more complex use of sensing and monitoring controls and systems is essential for a wide variety of engineering areas--from manufacturing to chemical processing to aerospace operations to even the everyday automobile. In turn, this has meant that the automation of manufacturing, process industries, and even building and infrastructure construction has been improved dramatically. And now with remote wireless instrumentation, heretofore inaccessible or widely dispersed operations and procedures can be automatically monitored and controlled. This already well-established reference work will reflect these dramatic changes with improved and expanded coverage of the traditional domains of instrumentation as well as the cutting-edge areas of digital integration of complex sensor/control systems. Thoroughly revised, with up-to-date coverage of wireless sensors and systems, as well as nanotechnologies role in the evolution of sensor technology Latest information on new sensor equipment, new measurement standards, and new software for embedded control systems, networking and automated control Three entirely new sections on Controllers, Actuators and Final Control Elements; Manufacturing Execution Systems; and Automation Knowledge Base Up-dated and expanded references and critical standards

**Pedagogical Documentation in Early Childhood Education** Feb 24 2020 Today, the documentation of children's education and development is an important part of educational work in early childhood education. This book systematises the topic of pedagogical documentation based on current empirical research. The book analyses different pedagogical reasons for documentation and then presents and discusses different procedures of pedagogical documentation in theory and empirical practice : Portfolio, Learning Stories, pedagogical documentation in the room, project documentation and digital pedagogical documentation. Pedagogical documentation is discussed in the tension between a social constructivist understanding of education on the one hand and a diagnostic logic of fostering on the other. The book is intended as a part of pedagogically oriented childhood research, which also wants to contribute to the reflection and improvement of pedagogical practice.

*Instrumentation: A Reader* Mar 07 2021 This book contains a selection of papers and articles in instrumentation previously published in technical periodicals and journals of learned societies. Our selection has been made to illustrate aspects of current practice and applications of instrumentation. The book does not attempt to be encyclopaedic in its coverage of the subject, but to provide some examples of general transduction techniques, of the sensing of particular measurands, of components of instrumentation systems and of instrumentation practice in two very different environments, the food industry and the nuclear power industry. We have made the selection particularly to provide papers appropriate to the study of the Open University course T292 Instrumentation. The papers have been chosen so that the book covers a wide spectrum of instrumentation techniques. Because of this, the book should be of value not only to students of instrumentation, but also to practising engineers and scientists wishing to glean ideas from areas of instrumentation outside their own fields of expertise. In recent years instrumentation has emerged as a discipline in its

own right rather than as an adjunct to traditional science and engineering disciplines. This development has been driven partly by the needs of industries for new and improved sensing techniques, and partly by new technological developments such as microprocessors, optical fibres and integrated silicon sensors which are revolutionising sensing and signal processing practice.
