*Ecological and Health Effects of Building Materials*  
Jun 05 2020 This book deals with the present adverse effects of using precarious building materials on the ecology and human health. Also, the detailed discussions on the novel and

greener construction materials and their utilization as an alternative to the conventional harmful existing methods and materials are also presented in the subsequent chapters. This book helps to fill the research gaps in

the existing prior-art knowledge in the field of sustainable construction and green building materials and methods giving due importance to ecology and health, specifically to the fields of sustainable structural engineering,

sustainable geotechnical engineering, sustainable road engineering, etc. This book helps in achieving a sustainable environment through possible adoption of innovative and ecological construction practices. Hence, this book acts as a practical workbook, mainly for the academicians and practicing engineers who are willing to work toward the consecrated building industry. It is a well-established fact that the constructions of the engineering structures consume more and more earth resources than any other human activities in

the world. In addition, the construction-related activities will produce several million tons of greenhouse gases, toxic emissions, water pollutants, and solid wastes. This creates a huge impact on environment and causes severe health issues on humans and animals. It is thus important to create an eco-friendly construction environment which can satisfy the ecological and health requirements. Perception, Design and Ecology of the Built Environment Jun 29 2022 This edited volume is a compilation of the 'built environment' in response to many investigations,

analyses and sometimes mere observations of the various dialogues and interactions of the built, in context to its ecology, perception and design. The chapters concentrate on various independent issues, integrated as a holistic approach, both in terms of theoretical perspectives and practical approaches, predominantly focusing on the Global South. The book builds fabric knitting into the generic understanding of environment, perception and design encompassing 'different' attitudes and inspirations. This book is an

important reference to topics concerning urbanism, urban developments and physical growth, and highlights new methodologies and practices. The book presumes an understanding unearthed from various dimensions and again woven back to a common theme, which emerges as the reader reads through. Various international experts of the respective fields working on the Global South contributed their latest research and insights to the different parts of the book. This trans-disciplinary volume appeals to scientists, students and professionals in the fields of

architecture, geography, planning, environmental sciences and many more. Global Health: U.S. Agencies Support Programs to Build Overseas Capacity for Infectious Disease Surveillance Aug 27 2019 The rapid spread of severe acute respiratory syndrome (SARS) in 2003 shows that disease outbreaks pose a threat beyond the borders of the country where they originate. Over the past decade, the United States has initiated a broad effort to ensure that countries can detect any disease outbreaks that may constitute a public health emergency of international

concern. Three U.S. agencies the Centers for Disease Control and Prevention (CDC), the U.S. Agency for International Development (USAID), and the Department of Defense (DOD) support programs aimed at building this broader capacity to detect a variety of infectious diseases.

### **New Public Management in Africa** Apr 15 2021

The administrative sciences have been dominated by a turn to managerial perspectives in the late 20th and early 21st centuries, and in the spirit of this turn, 'New Public Management' (or NPM) promises to produce efficient, responsible and client-oriented

*Downloaded from  
idealdayout.com on

guest*

public services. The reforms carried out in the pursuit of New Public Management are often accompanied by great optimism and rapid, enthusiastic steps toward implementation. Even in highly developed industrial countries, however, these fundamental reforms often overlook the political and cultural contexts of the implementing country. *New Public Management in Africa: Emerging Issues and Lessons* provides much-needed theoretical foundations for NPM reforms in the African context and reflects on the success of existing reforms in the development of

several African states. The individual contributions in this timely volume provide important analyses of academic discourse, practical policy, achievements, and desiderata. The book as a whole, however, provides a valuable impetus for public administration research in and on African states, sharing findings on the results of reforms to date and adjustments required for these reforms to succeed. For public administration researchers outside of Africa, this book offers a review of New Public Management case studies that are unavailable or difficult to find

elsewhere, contributing much to the exchange between African and Western administration science research, and demonstrating that African administrative research is well-prepared to help resolve global challenges.

Tanzania Oct 02 2022 This volume examines key policy challenges facing Tanzania over the coming decades in the areas of agriculture, trade, urbanization, employment, finance, and natural investment.

**Change** Oct 10

2020 Godfrey

Mwakikagile looks

at the major

changes Africa has

gone through since

the end of colonial rule including some of the events he witnessed in his home country Tanganyika - later Tanzania - since the late 1950s, the dawn of a new era when Africa was headed towards independence. One of the fundamental changes he looks at took place in the 1990s when most countries across the continent gradually moved from authoritarian rule to democracy, although he contends that the gains made during that transitional period have not been consolidated and sustained through the years. The majority of Africans still live under one form of authoritarian rule or another

including outright dictatorship.  
Mining for Change  
Sep 01 2022 For a growing number of countries in Africa the discovery and exploitation of natural resources is a great opportunity, but one accompanied by considerable risks. This book presents research on how to better manage the revenues and opportunities associated with natural resources.  
*Tanzania at the Turn of the Century*  
Nov 10 2020 This report identifies lessons from Tanzania's development experience over the past four decades, and assesses how a higher sustained growth and a better livelihood for its citizens in the

future can be achieved. The background papers: review and evaluate the country's growth and poverty reduction performance; highlight the strategic and institutional imperatives needed for developing sustained growth and reducing poverty; and consider the development of the private sector and its increased role in the growth and modernisation of the Tanzanian economy.  
**Cities on a Finite Planet** Nov 30 2019 Cities on a Finite Planet: Transformative responses to climate change shows how cities can combine high quality living

conditions, resilience to climate change, disaster risk reduction and contributions to mitigation/low carbon development. It also covers the current and potential contribution of cities to avoiding dangerous climate change and is the first book with an in-depth coverage of how cities and their governments, citizens and civil society organizations can combine these different agendas, based on careful city-level analyses. The foundation for the book is detailed city case studies on Bangalore, Bangkok, Dar es Salaam, Durban, London, Manizales, Mexico City, New

York and Rosario. Each of these was led by authors who contributed to the IPCC's Fifth Assessment and are thus acknowledged as among the world's top specialists in this field. This book highlights where there is innovation and progress in cities and how this was achieved. Also where there is little progress and no action and where there is no capacity to act. It also assesses the extent to which cities can address the Sustainable Development Goals within commitments to also dramatically reduce greenhouse gas emissions. In this, it highlights how much progress on these different

agendas depends on local governments and their capacities to work with their low-income populations. *Basic Data on the Economy of East Africa* Aug 20 2021 *Global Health: U.S. Agencies Support Programs to Build Overseas Capacity for Infectious Disease Surveillance* Jul 27 2019 The rapid spread of severe acute respiratory syndrome (SARS) in 2003 shows that disease outbreaks pose a threat beyond the borders of the country where they originate. Building Sustainability Through

Environmental Education Mar 03 2020 Global climate change will alter the environmental forces of today and increasingly affect weather patterns, rises in temperature, and government policies for decades to

come. To provide future generations with the knowledge and resources needed to develop solutions for these ongoing issues, current shortcomings in environmental education need to be addressed.

Building Sustainability Through Environmental Education is a collection of innovative research on methods and applications for creating comprehensive environmental education programs that support sustainability practices and instruct students on a variety of topics including water resource management, disaster risks and

mitigation, and issues surrounding climate change.

Targeting an audience of educators, conservationists, instructional designers, administrators, academicians, researchers, policymakers, and students, this publication provides practical applications and examples of integrating best environmental sustainability practices into education.

the current policy situation and makes recommendations for enabling Tanzania to attract higher investment to exploit its full potential and become a regional trade and investment hub.

**Building enabling legal frameworks for sustainable land-use investments in Zambia, Tanzania and Mozambique:**

**A synthesis** Mar 15 2021 The International Development Law Organization (IDLO) and the Center for International Forestry Research (CIFOR) assessed the legal frameworks for major natural resource sectors in Zambia, Tanzania and Mozambique to

analyze whether, and to what extent they enable sustainable investments. National development plans in each country, and their crosscutting laws on land and the environment incorporate principles of sustainable development. However, sector-specific laws governing forestry, agriculture, mining and energy reflect these principles to varying degrees. Relying significantly on natural resources, these countries have witnessed consistent GDP growth in recent years. Despite their resource wealth and increased investments,

poverty and resource degradation persist. Rural populations remain disproportionately affected, with limited access to basic services and increased vulnerability to the impacts of deforestation and climate change. This Synthesis report outlines four key insights on issues identified by the legal assessments that can either hinder or enable sustainable land use investments. These consist of: Reframing investment incentives and focusing on smallholder interests; Protecting customary land rights and ensuring consultation and

consent: Establishing clear and effective regulations, strengthening enforcement capacity and supporting decentralization and Raising awareness, guaranteeing participation and promoting freedom of information. The report demonstrates that landscapes governance embodying the rule of law and adherence to social and environmental safeguards can create enabling conditions for sustainable investments. Equity, responsive legal and policy reforms, improved enforcement capacity, strengthened

participatory mechanisms and other rule of law considerations are critical to planning and managing investments so that they contribute to sustainable development.

### **Effectiveness of Anti-Corruption Agencies in East Africa: Kenya, Tanzania and Uganda**

Jan 25 2022 With reportedly over USD50 billion lost annually through graft and illicit practices, combating corruption in Africa has been challenging. However, laws and policies at the continental, regional and

national levels have been promulgated and enacted by African leaders. These initiatives have included the establishment of anti-corruption agencies mandated to tackle graft at national level, as well as coordinate bodies at regional and continental levels to ensure the harmonisation of normative standards and the adoption of best practices in the fight against corruption. Yet, given the disparity between the apparent impunity enjoyed by public servants and the anti-corruption rhetoric of governments in the region, the effectiveness of these agencies is viewed with

*Downloaded from  
idealdayout.com on

guest*

scepticism. This continent-wide study of anti-corruption agencies aims to gauge their relevance and effectiveness by assessing their independence, mandate, available resources, national ownership, capacities and strategic positioning. These surveys include evidence-based recommendations calling for stronger, more relevant and effective institutions that are directly aligned to regional and continental anti-corruption frameworks, such as the African Union Convention on Preventing and Combating Corruption (AUCPCC), which the three countries

in this current report - Kenya, Tanzania and Uganda - have all ratified. *Overseas Business Reports* May 17 2021 [Corruption as an Empty Signifier](#) May 29 2022 Corruption as an Empty Signifier critically explores the ways in which corruption in Africa has been equated with African politics and political order, and offers a novel approach to understanding corruption as a potentially emancipatory discourse of political transformation. *Building State Capacity in Africa* Oct 22 2021 This publication considers options for strengthening

institutional capacity within the public sector in African countries, by drawing on the experiences of public sector reform programmes in over a dozen African states. Issues discussed include: the relationship between governance and economic development, public expenditure and accountability, anti-corruption reforms, the politics of decentralisation, political structures and public service delivery. **Government Finance Statistics Yearbook 2016** Mar 27 2022 This annual publication provides detailed data on transactions in revenue expense.

book, and each country-specific chapter is structured to consider the legal and policy frameworks, administrative infrastructure and procedures, and implementation mechanisms, as well as the experiences, current activities, and future plans and programmes with respect to construction industry development in each country. The concluding chapter looks forward and considers the implications of future trends for the construction industries in

developing countries and the actions which will be required to address them. Chapters cover: India, Singapore, Chile, South Africa, Tanzania, Malaysia, Botswana, Ghana, Uganda, Indonesia, China, Croatia, and Eswatini. Readers will learn about the wealth of comparable stories from global coverage from the detailed country-specific cases. Building on important scholarly works in the field, this book is essential reading for academics, researchers, and policy makers in built environments, economics,

construction management, infrastructure management, and the wider construction industry.
