Key Topics in Psychiatry Jun 26 2022 This title is directed primarily towards trainee psychiatrists sitting MRCPsych or similar exams and qualified psychiatrists. It summarizes information on a wide range of topics such as important journal articles, clinical trials, government White Papers, guidelines and rating scales which are vital for both good exam performance and clinical practice, but which are not available elsewhere between one set of covers. Brings together information from disparate sources on the major areas of psychiatry - saves much trawling through journals and other sources. Covers the vital areas for each topic as relevant - summaries of journal articles, clinical trials, government directives,

national guidelines. Presents the information in an easily accessible form through the use of bullet points, lists, tables and diagrams. Invaluable for the hard pressed exam candidate revising for the essay paper and clinical sections of Part II of the MRCPsych and similar exams. Also highly relevant for psychiatric CPD and for day to day practice.

Textbook of Occupational Medicine Practice Jan 10 2021 This book provides a link between occupational health and clinical practice. It aims to provide a valuable starting point for health professionals with an interest in occupational medicine as well as those intending to specialize in occupational medicine. It will also serve as a useful guide for all those who are interested in occupational medical practice. These include medical students at various levels, occupational health nurses, general practitioners, or colleagues and professionals in occupational health and safety — in other words, for all who have committed themselves to do the best practice for the health of working people. This third edition of the textbook has been fully revised and includes new materials and chapters. The contents of the book have been streamlined to appear in two sections. The approach of examining occupational health issues and concerns from the standpoint of clinical presentations of the different organ systems is retained. These clinically oriented chapters form Section One. Section Two comprises issues of special interest to occupational health practitioners such as screening and routine medical examinations, assessment of disability for compensation, medical planning and management of industrial disasters, occupational medicine practice and the law, and the prevention of occupational diseases. Several changes have directly resulted from feedback from readers of the previous editions. Among these are the inclusion of new chapters on occupational infections, metabolic disorders, and occupational medicine practice and the law. As before, case studies have been incorporated in the chapters to make clear the relevant issues.

Schizophrenia Oct 26 2019 Schizophrenia is one of the most complex and puzzling diseases to affect mankind. It is the most common of the severe mental illnesses (psychoses) with an estimated prevalence of 0.5 - 1% in the general population and accounts for a very large portion of the day to day workload of the average psychiatrist. 50% of long-term psychiatric patients in mental hospitals are schizophrenic. There is a great deal of controversy about the causes, diagnosis and treatment of schizophrenia with the consequence that a huge amount of research is carried out in the field by psychiatrists, psychologists, neuroscientists and pharmacologists. For the average practising psychiatrist seeing schizophrenics on a regular basis, making sense of the vast body of information on the subject and filtering out what is of clinical relevance can be very difficult. There is a constant stream of new drugs emerging and the newer generation of drugs (the so-called atypicals) is very effective, but often expensive. The Editors (one American and one British) are both highly respected clinical psychiatrists who are probably the leading experts on schizophrenia from their respective countries and jointly have published almost 150 papers on the subject. They have brought together a strong group of contributors from the USA, UK and Europe to produce what will be an essential reference for the trainee and practising psychiatrist. The book consists of four

sections; descriptive aspects, causative aspects, physical treatments and psychological/behavioural/social treatments. There will be discussion of the theoretical controversies over symptomatology, classification and aetiology, the relationship of schizophrenia to the other psychoses, the significance of positive and negative symptoms and pre-morbid personality. There will be chapters on organic models of schizophrenia, neurodevelopmental, genetic and structural studies and the role of high-expressed emotion. The final section will cover social and environmental treatment, the role of the families of schizophrenics and the psychoanalytical therapies. There is a new chapter on the patient's perspective written by a former patient.
