CADS - A Computer Aided Design System, Jan 05 2021 This is the final summary report for the Computer Aided Design System, CADs. CADs is a pre and post

processor for structural analysis and optimization programs based on the finite element method. The system supports five functional modules controlled by an

Executive Monitor. All of these modules communicate with a data base through a data manager. In addition a post output translator, CADSP, is available which

processes output from finite element programs, e.g. NASTRAN, directly into the data base. This report gives an overview of the capability available in CADs.

Several illustrations demonstrate the functions of the Preprocessor, Display, and Postprocessor Modules. Keywords: minicomputers; FORTRAN; VAX 11/780

computers.

Autodesk Arnold Render User Guide for MAYA, Mar 27 2020 Arnold Arnold is an advanced cross-platform rendering library, or API, used by a number of

prominent organizations in film, television, and animation, including Sony Pictures Imageworks. It was developed as a photo-realistic, physically-based ray tracing

alternative to traditional scanline based rendering software for CG animation. Arnold uses cutting-edge algorithms that make the most effective use of your

computer's hardware resources: memory, disk space, multiple processor cores, and SIMD/SSE units. The Arnold architecture was designed to easily adapt to

existing pipelines. It is built on top of a pluggable node system; users can extend and customize the system by writing new shaders, cameras, filters, and output

driver nodes, as well as procedural geometry, custom ray types and user-defined geometric data. The primary goal of the Arnold architecture is to provide a

complete solution as a primary renderer for animation and visual effects. However, Arnold can also be used as: A ray server for traditional scanline renderers. A

tool for baking/procedural generation of lighting data (lightmaps for videogames). An interactive rendering and relighting tool.

The Rhetorical Nature of XML 20 2019 The Rhetorical Nature of XML is the first volume to combine rhetoric, XML, and knowledge management in a substantive manner. It serves as a primer on XML and XML-related technologies, illustrating how the naming of XML elements can be understood as a rhetorical act, and detailing the essentials of knowledge management practices that illustrate the need for intelligently conceived databases in organizations. Authors J.D. Appelen and Rudy McDaniel explain how technical knowledge and rhetorical knowledge are symbiotic assets in the modern information economy, emphasizing that skilled professionals and apprentice learners must not only adapt to and become adept with new technological environments, but they must also remain aware of the dynamic social and technological contexts through which they communicate. Appelen and McDaniel use this subject as a catalyst to encourage interdisciplinary connections and projects between experts in fields such as technical communication, digital media, library science, computer science, and information technology. The authors demonstrate techniques for working with XML in interdisciplinary projects with attention to single sourcing and content management. Interviews with practitioners working with XML for research and in industry are also included, to illustrate how XML is currently being used in a variety of disciplines, such as technical communication and digital media. Combining applied theory and XML technology to solve real-world problems in technical communication and digital media, this work provides an entry point for students and practitioners who do not have an extensive background in markup languages, enabling them to begin developing user-centric projects using XML.
