[Organizational Strategy, Structure, and Process](#) Mar 15 2021 "Books and articles come and go, endlessly. But a few do stick, and this book is such a one. Organizational Strategy, Structure, and Process broke fresh ground in the understanding of strategy at a time when thinking about strategy was still in its early days, and it has not been displaced since." —David J. Hickson, Emeritus Professor of International Management & Organization, University of Bradford School of Management Originally published in 1978, Organizational Strategy, Structure, and Process became an instant classic, as it bridged the formerly separate fields of strategic management and organizational behavior. In this Stanford Business Classics reissue, noted strategy scholar Donald Hambrick provides a new introduction that describes the book's contribution to the field of organization studies. Miles and Snow also contribute new introductory material to update the book's central concepts and themes. Organizational Strategy, Structure, and Process focuses on how organizations adapt to their environments. The book introduced a theoretical framework composed of a dynamic adaptive cycle and an empirically based strategy typology showing four different types of adaptation. This framework helped to define subsequent research by other scholars on important topics such as configurational analysis, organizational fit, strategic human resource management, and multi-firm network organizations.

Applications of Bat Algorithm and its Variants Apr 15 2021 This book highlights essential concepts in connection with the traditional bat algorithm and its recent variants, as well as its application to find optimal solutions for a variety of real-world engineering and medical problems. Today, swarm intelligence-based meta-heuristic algorithms are extensively being used to address a wide range of real-world optimization problems due to their adaptability and robustness. Developed in 2009, the bat algorithm (BA) is one of the most successful swarm intelligence procedures, and has been used to tackle optimization tasks for more than a decade. The BA's mathematical model is quite straightforward and easy to understand and enhance, compared to other swarm approaches. Hence, it has attracted the attention of researchers who are working to find optimal solutions in a diverse range of domains, such as N-dimensional numerical optimization, constrained/unconstrained optimization and linear/nonlinear optimization problems. Along with the traditional BA, its enhanced versions are now also being used to solve optimization problems in science, engineering and medical applications around the globe.

Minimum Wages in China Sep 20 2021 This book considers the positive and negative impacts of the minimum wage policy in China. Since China enacted its first minimum wage law in 1994, the magnitude and frequency of changes in the minimum wage have been substantial, both over time and across jurisdictions. The results from China's experience show that rapidly increasing minimum wages have helped increase average wages and reduce the gender wage gap, income inequality, and poverty. However, the fast-rising minimum wage has also resulted in the loss of employment for young adults, women, low-skilled workers, and migrant workers. Additionally, higher minimum wages have a negative impact on firm profitability and

adverse effects on firm's human capital investment. In summary, the Chinese minimum wage policy has shown both positive and negative impacts on the affected workers. Through unpacking these findings, the book highlights the importance of rigorous research to inform evidence-based policymaking and provides lessons for other transitional and developing economies. Li Shi is Professor of Economics in the School of Public Affairs at Zhejiang University, China. Carl Lin is an Assistant Professor of Economics at Bucknell University in Pennsylvania, USA.

Santro May 29 2022 'There's no business like the car business!' Within months of its launch in late 1998, with every well-known global automobile brand jockeying for a foothold in a small-car market almost monopolized by Maruti Udyog Limited, Hyundai Motor India's debut production, the Santro, emerged as a force to reckon with. The first car to be conceptualized and designed for - and then developed and manufactured in - India, the 'Sunshine Car' has, over a period of sixteen years, set the record for the quickest small car brand to go from zero to one million units sold. It achieved profitability for Hyundai at an unprecedented speed and made an impressive global impact as a made-in-India automobile in markets as diverse as Algeria and Zimbabwe, Western Europe and North America. In Santro: The Car That Built a Company, BVR Subbu, who spearheaded much of the Santro's success, reveals the hitherto untold story of how this small car made such a big impact. Vivid anecdotes detail the challenges of introducing a new product in a new market, the canny business strategies that were employed to get the better of rival brands, the unforgettable marketing campaigns that made all the difference - and the thrills of the high-stakes power battles and everyday drama that characterize corporate India. By turns revelatory, insightful and delightfully engaging, this is a business story with a difference about a car like no other.

Corporate Governance in Developing and Emerging Markets Sep 01 2022 Throughout the world, the Anglo-American model of corporate governance tends to prevail - but no two countries are identical. Governance outcomes in developing and emerging economies often deviate from what theory predicts, due to a wide range of factors. Using insights from New Institutional Economics, Corporate Governance in Developing and

Emerging Markets aims to explain the different issues and cultural and legal factors at play, and put forward an alternative governance framework for these economies. Structured in three parts, this text investigates different models of corporate governance; it explores the realities of corporate governance in ten nations, including the 'BRICS' (Brazil, Russia, India, China and South Africa) and 'MINT' (Mexico, Indonesia, Nigeria and Turkey) countries; and then considers corporate governance reform. This interdisciplinary text will be a valuable tool for students of corporate governance across Business, Economics and Law; and an equally useful resource for anyone working in or carrying out research in this area.
