Relational Anthropology for Contemporary Economics Nov 12 2020 This open access book offers a multidisciplinary dialogue on relational anthropology in contemporary economics. A

particular view of the human being is often assumed in economic models, but seldom acknowledged let alone explicated. Addressing this neglected area of research in economic studies, altogether the contributors touch upon the importance and potential of virtues, the notions of freedom and self-love, the potential of simulation models, the dialectics of love, and questions of methodology in constructing a relational anthropology for contemporary economics. The overall result is a highly informative and constructive dialogue, establishing inter alia a research agenda for future collaborative and multidisciplinary study.

The Idea of History in Constructing Economics Jul 09 2020 How scientific is economics? This question has often been framed by analogies and correspondences made between economics and other, seemingly more well-established scientific disciplines, starting with classical mechanics. At the same time economics is likely to be seen in opposition to or in contrast with history, where the reliance upon generalizing rules, thought experiments, and model construction in economics is set against the amassing of particular facts intended to create narratives in history. In this new volume, Turk explores the relationship between economics and history, including the often fraught one between economics and economic history, making the

case that economics does in fact require the proper grounding in history that has so often been ignored. This work challenges the attempt to link economics with other, more clearly 'scientific' disciplines as flawed and fundamentally wrongheaded. A key element of this book is its examination of the gaps and associations that exist in, or are seen through, linkages with thermodynamics, classical mechanics, biology, literature, mathematics, philosophy, and sociology. This exploration is frequently undertaken through study of the work of one or more major figures in the history of economic thought, ranging from Quesnay and Smith, through Walras and Max Weber, to Robinson, Krugman, David, and Arthur. Through the possibility of an alternative to the gaps noted in each such comparison, the underlying, necessary connection between economics and history can be brought out. The book concludes by exploring the basis for the positive construction of a historical economics. This book is suited for those who study history of economic thought and philosophy of economics.

Open-Economy Macroeconomics May 19 2021 The integration of market economies is one of the most remarkable features of international economics, which has important implications for macroeconomic performance in open economies. Equally important is the declining relevance of the real versus the monetary theory dichotomy. These papers focus on those aspects of monetary policy which relate to credibility and non-neutrality; the domestic adjustment to foreign shocks; the interdependence of open economies and their strategic interactions. An important section is also devoted to the innovative modelling of exchange rate dynamics.
