Cross-border Trade and the Parallel Currency  
Market Jul 02 2022 The authors of this study  
challenge the assumptions of the World Bank  
that the expansion in informal cross-border  
trade is a vindication of the market-liberalizing  
thrust of structural adjustment, and that  
adjustment policies have improved the  
effectiveness of an "independent" bourgeoisie  
that is emerging out of this trade as an agent of  
regional integration. Instead, they make the case  
for the adoption of what they call a  
"development approach" for tapping the benefits  
of the informal currency markets, as an  
alternative to the "market coercion" of structural  
adjustment.

**River Resource Management in the Grand  
Canyon** May 08 2020 Federal management of  
water is undergoing a change that involves a  
drastic reduction in the number of new water  
projects and an increase in emphasis on the  
quality of water management. This book  
summarizes and analyzes environmental

research conducted in the lower Colorado River  
below the Glen Canyon Dam under the  
leadership of the Bureau of Reclamation. It  
reviews alternative dam operations to mitigate  
impacts in the lower Colorado riverine  
environment and the strengths and weaknesses  
of large federal agencies dealing with broad  
environmental issues and hydropower  
production. While many problems remain to be  
solved, the Bureau of Reclamation through the  
Glen Canyon area. The lessons of GCES are  
transferable to other locations and could be the  
basis for a new era in the management of  
western waters.

*Private and Public Sector Collaboration in  
Guam's Tourism Industry: Is Guam Prepared for  
the Future?* Nov 13 2020 The topic of tourism  
development has been explored by a number of  
scholars and increasingly, over the past decade,  
more literature has become available on tourism  
development on small islands . For many of the  
small island territories or nations, they share a  
number of major issues in the area of tourism.  
These include vast distances from source

markets, foreign investment and the resulting leakage of revenue, over-dependence on tourism (mono-structured economy), dependence on imports, and an overburdened infrastructure, just to name a few (Gössling 2003; Harrison, 2004; McElroy, 2006). Most island destinations rely on stakeholders from not only a single sector, but from both private and public sectors to tackle these issues (Buhalis, 1999). As a tourism-dependent economy, Guam receives at least sixty percent of its governmental revenues from tourism. Japanese visitors had made up over 80 percent of Guam's visitor arrivals in earlier years, but numbers started to drop in recent years due to a number of reasons, such as natural disasters, world events, as well as stiffer competition from similar resort destinations. Still, the market remains the largest source of visitors for Guam, with South Korea coming in a distant second in ranking making up approximately 12 percent of Guam's visitor arrivals. As background information to illustrate the importance of public and private sector collaboration efforts on Guam, this research examines some of the changes occurring in Japanese overseas travel. It also reviews how tourist industry stakeholders in a nearby destination like Guam can adopt strategies to meet the changing expectations of this important market. The primary research of this thesis involves the analysis of qualitative data generated from in-depth interviewing in examining the issue of collaboration between the private and public sectors as a method for

assisting Guam's tourism industry to prepare for the future. This is followed by multiple case research (Yin 1994) that investigates strategies used in destinations to enhance tourist experiences through attractions. The SWOT Analysis is also utilized as an example of a tool to assist stakeholders in understanding the environment of the present to prepare strategies for the future.
