People of the Plow Sep 05 2020 For more than two thousand years, Ethiopia's ox-plow agricultural system was the most efficient and innovative in Africa, but has been afflicted in the recent past by a series of crises: famine, declining productivity, and losses in biodiversity. James C. McCann analyzes the last two hundred years of agricultural history in Ethiopia to determine whether the ox-plow agricultural system has adapted to population growth, new crops, and the challenges of a modern political economy based in urban centers. This agricultural history is set in the context of the larger environmental and landscape history of Ethiopia, showing how farmers have integrated crops, tools, and labor with natural cycles of rainfall and soil fertility, as well as with the social vagaries of changing political systems. McCann traces characteristic features of Ethiopian farming, such as the single-tine scratch plow, which has retained a remarkably consistent design over two millennia, and a crop repertoire that is among the most genetically diverse in the world. People of the Plow provides detailed documentation of Ethiopian agricultural practices since the early nineteenth century by examining travel narratives, early agricultural surveys, photographs and engravings, modern farming systems research, and the testimony of farmers themselves, collected during McCann's five years of fieldwork. He then traces the ways those practices have evolved in the twentieth century in response to population growth, urban markets, and the presence of new technologies.

Fair Trade and Organic Agriculture Jul 04 2020 The markets for organic and fair trade certified commodities are growing rapidly, with environmentally sound and more equitable certification systems likely to offer benefits for both small-scale farmers and society at large. Despite much debate about their contribution to sustainability, there has been little scientific analysis, so it is vital to assess if it is technically and economically feasible to meet growing consumer demands regarding food safety, quality and ethics through smallholder and marginal producers. Overall, there is a need to explore the potential of these certification systems as emerging areas in research and development cooperation. This book is an important read for researchers and students in agricultural and development economics, and it is also a useful resource for policy makers and practitioners involved in organic and fair trade agriculture. *Dictionary of Jamaican English* Jun 02 2020 The method and plan of this dictionary of Jamaican English are basically the same as those of the Oxford English Dictionary, but oral sources have been extensively tapped in addition to detailed coverage of literature published in or about Jamaica since 1655. It contains information about the Caribbean and its dialects, and about Creole languages and general linguistic processes. Entries give the pronunciation, part-of-speech and usage of labels, spelling variants, etymologies and dated citations, as well as definitions. Systematic indexing indicates the extent to which the lexis is shared with other Caribbean countries.

Transcending Boundaries Jan 22 2022 A compilation of abstracts of papers presented at the 8th International Symposium on Society and Resource Management, held June 17-22, 2000. The abstracts explore the social dimensions of managing spatial landscapes for various purposes. The theme of the symposium, "Transcending Boundaries: Natural Resource Management from Summit to Sea," provided participants with the opportunity to explore the challenges of working across conceptual, cultural, and physical boundaries. The symposium focused on how social science research is being brought to bear on the exploration of "boundary issues" in resource management.

Climate-Smart Food Jun 22 2019 This open access book asks just how climate-smart our food really is. It follows an average day's worth of food and drink to see where it comes from, how far it travels, and the carbon price we all pay for it. From our breakfast tea and toast, through brektime chocolate bar, to take-away supper, Dave Reay explores the weather extremes the worlds farmers are already dealing with, and what new threats climate change will bring. Readers will encounter heat waves and hurricanes, wildfires and deadly toxins, as well as some truly climate-smart solutions. In every case there are responses that could cut emissions while boosting resilience and livelihoods. Ultimately we are all in this together, our decisions on what food we buy and how we consume it send life-changing ripples right through the global web that is our food supply. As we face a future of 10 billion mouths to feed in a rapidly changing climate, its time to get to know our farmers and herders, our vintners and fisherfolk, a whole lot better. Dave Reay is Professor of Carbon Management at the University of Edinburgh, UK. He has studied climate change for over 20 years, from warming impacts in the Southern Ocean, through carbon fluxes in forests, to greenhouse gas emissions from wetlands and agriculture. In 2018 he received the Chancellors Award for Teaching for his work in climate change education. His latest project involves managing a large area of coastal land in Scotland to regrow native tree species and trap a lifetimes carbon.

Ecophysiological Diversity of Wild Arabica Coffee Populations in Ethiopia Jul 28 2022 Coffea arabica, one of the economically most important crops worldwide, occurs naturally in the undergrowth of montane rainforests of Ethiopia. The study provides the first detailed ecophysiological investigations of wild coffee populations. It demonstrates the inter- and intra-regional variability in phenotypic and hydrological characteristics of wild coffee. The results reveal very different strategies of wild coffee seedlings for coping with drought stress. The ecophysiological diversity shows the importance of Ethiopian wild coffee populations as gene pools for future breeding programs, and underlines the need for an in-situ conservation strategy. The study includes recommendations for coffee forest management and the use of wild arabica coffee in Ethiopia.

Where the Wild Coffee Grows Oct 31 2022 "Enchanting . . . An absorbing narrative of politics, ecology, and economics."--New York Times Book Review (Editor's Choice) "A must-read for coffee enthusiasts."--Smithsonian (Best of the Year) "Reads like an engaging multimystery detective novel."--Wall Street Journal "Fascinating . . . How a local crop transformed into a global commodity."--Real Simple (Best of the Month) Coffee is one of the largest and most valuable commodities in the world. This is the story of its origins, its history, and the threat to its future, by the IACP Award-winning author of Darjeeling. Located between the Great Rift Valley and the Nile, the cloud forests in southwestern Ethiopia are the original home of Arabica, the most prevalent and superior of the two main species of coffee being cultivated today. Virtually unknown to European explorers, the Kafa region was essentially off-limits to foreigners well into the twentieth century, which allowed the world's original coffee culture to develop in virtual isolation in the forests where the Kafa people continue to forage for wild coffee berries. Deftly blending in the long, fascinating history of our favorite drink, award-winning author Jeff Koehler takes readers from these forest beginnings along the spectacular journey of its spread around the globe. With cafés on virtually every corner of every town in the world, coffee has never been so popular--nor tasted so good. Yet diseases and climate change are battering production in Latin America, where 85 percent of Arabica grows. As the industry tries to safeguard the species' future, breeders are returning to the original coffee forests, which are under threat and swiftly shrinking. "The forests around Kafa are not important just because they are the origin of a drink that means so much to so many," writes Koehler. "They are important because deep in their shady understory lies a key to saving the faltering coffee industry. They hold not just the past but also the future of coffee."

Significance Current Status & Future Prospect of Wild Coffee Production Aug 29 2022 The existence of wild coffee forest is economically rewarding, socially healthy and environmentally friendly. The significance of wild coffee production initiated the collaborated efforts from different actors, playing a pivotal role in order to sustain the existence function and get benefited from it. The linkages between wild coffee producers and end users build on the actors' involvement as facilitating agents in wild coffee production and marketing. Currently the largest proportion of wild coffee forest coverage is under managed that is intended to boost up the productivity of wild coffee forest with the increasing collaborated efforts of different institutions in different levels (production and marketing). Plant-Parasitic Nematodes of Coffee Aug 24 2019 When I conceived this book, what I had in mind was what I did not know about coffee-parasitic nematodes (CPNs). Indeed, after reading many papers and several chapters in books, I felt far from having a comprehensive understanding of the subject. Not only would it be a daunting task to retrieve the numerous articles, reports, theses and dissertations on CPNs published since 1878, but it would also be impossible to learn, on my own, from all the enormous experience acquired by nematologists and coffee growers in so many countries. Therefore, this book is dedicated to those with restless minds, who want to know more about CPNs and their importance in coffee production worldwide. This book has been diligently written by top scientists in their areas of expertise or country, and it has been meticulously edited to guarantee precision without compromising an enjoyable read. I learned a lot from this book...I'm sure you will too. Finally, I'd like to thank Zuzana Bernhart from Springer, who believed in this project and decided to publish it; Susan Casement, who revised all chapters for grammatical correctness; and all the contributors, without whom this book would never have become a reality. Coffee Atlas of Ethiopia Nov 07 2020 This richly illustrated volume is the first complete atlas of coffee production in Ethiopia, birth-place of coffee drinking and the main home of wild arabica coffee (*Coffea arabica*). Around 15 million Ethiopians are coffee farmers, and Ethiopia is Africa's largest coffee producer and one of the most important coffee-growing regions of the world, renowned for its diversity of flavour profiles, including those of the celebrated coffees of Harar, Limu, Sidamo, and Yirgacheffe. The aim of the Coffee Atlas of Ethiopia is to inform the reader about the coffee landscape of Ethiopia. It shows where coffee is grown, where the natural coffee forests are located, and where coffee could be grown. The atlas maps are accompanied by information on coffee farming, environment and climate, and a description of the main coffee areas. Also included in the atlas are key coffee origins, coffee towns and coffee delivery centres, as well as other useful items. The atlas can be used to assess the potential and vulnerability for coffee farming in Ethiopia, as well as provide a logistics resource for the coffee sector and those otherwise working with, or interested in, coffee. It is also an essential reference for resource managers.
